Dear recruiter:

I was so excited to see the new opening, I feel I'm the right person for this job and I hope to get the chance to talk with you.

I have strong UX/UI design experience both in web design and mobile app design. I did a summer intern at Glassdoor as a UX/UI design intern. I was working on the redesign of Glassdoor Employer Center, Updating pattern library, data-driven user experience design, etc. My product at Tencent was QQ Browser (based on Android), which had over 30 million daily active users. I participated in the whole user centered design precess.

I have 3-year experience in product management and won Outstanding Employee of the years 2012 (Top 5%) at Tencent. I'm familiar with agile development, scrum, lean UX. I can think from PM's perspective with compassion and therefore communicate quite well with product managers.

I'm familiar with front-end development. I designed and implemented my portfolio website. I'm comfortable using HTML, CSS and jQuery. In addition, I have a bachelor's degree in telecommunication engineering, which makes it much easier for me to communicate and collaborate with engineers.

I'm receiving solid education in user centered design. I'm currently a second-year MS student at Human Centered Design & Engineering at University of Washington, will graduate in March, 2016. My GPA is 3.9. I'm learning new skills such as conducting experimental and qualitative research, visual communication, etc.

I have wide experience in using design tools, such as Axure, Photoshop, InDesign, Illustrator, Sketch, InVision and other tools like Tableau, Github, FileZilla, Dreamweaver, and Latex.

Thanks for taking your time to consider my application, I'm looking forward to hearing from you.

Sincerely, Ruiyi Zhou
